

*School of Electrical Engineering and Telecommunications,
University of New South Wales*

COMP3221

Microprocessors and Embedded Systems

Laboratory Manual

Semester 2, 2003

CRICOS Provider Number: 00098G

Table of Contents

Experiments

1. Introduction to the Laboratory	1
2. Introduction to Assembly Language Programming	21
3. Data Types, Data Structures and Functions	37
4. Interfacing to Input/Output Devices	59
5. Operating Modes, System Calls and Interrupts	71

Appendices

- A. An Introduction to the GNU Assembler
- B. An Introduction to the GNU Compiler
- C. An Introduction to the GNU Debugger
- D. An Introduction to Komodo
- E. The DSLMU Microcontroller Board Hardware Reference Manual
- F. ARMv4T Partial Instruction Set Summary
- G. ARM Instruction Set Quick Reference
- H. Atmel AT91R40008 Microcontroller Datasheet Summary
- I. Extract from *Unicode C0 Controls and Basic Latin* (Equivalent to the ASCII Table)

This Laboratory Manual belongs to:

.....

Student Number:

Appendix A

An Introduction to the GNU Assembler

Appendix B

An Introduction to the GNU Compiler

Appendix C

An Introduction to the GNU Debugger

Appendix D

An Introduction to Komodo

Appendix E

The DSLMU Microcontroller Board Hardware Reference Manual

Appendix F

ARMv4T Partial Instruction Set Summary

Appendix G

ARM Instruction Set Quick Reference

Appendix H

Atmel AT91R40008 Microcontroller Datasheet Summary

Appendix I

Extract from *Unicode C0 Controls and Basic Latin*
(Equivalent to the ASCII Table)
